

AquaForge Robotics Pvt. Ltd., - Pitch Deck

Dr. Rajendra Thilahar C, M.E., Ph.D.,
Director, AquaForge Robotics Pvt. Ltd.,
Chennai, Tamil Nadu.

Vision / Elevator Pitch

To lead the deployment of AI-enabled drone patrolling systems for wildlife protection and anti-poaching by delivering real-time surveillance, intelligent threat detection, and sustainable conservation solutions.

Our vision is to safeguard biodiversity, support forest authorities, and promote environmental stewardship through indigenous technology, research, and education.

Problem Statement

India loses thousands of wildlife lives annually due to **poaching, illegal logging, and encroachment**. Existing ground patrols are **human-intensive, risky, slow, and cover limited areas**.

Satellite and CCTV-based solutions lack **real-time actionable intelligence** in dense forests. There is a **critical need for an autonomous, real-time, AI-powered surveillance system** that can monitor large forest areas continuously and accurately.

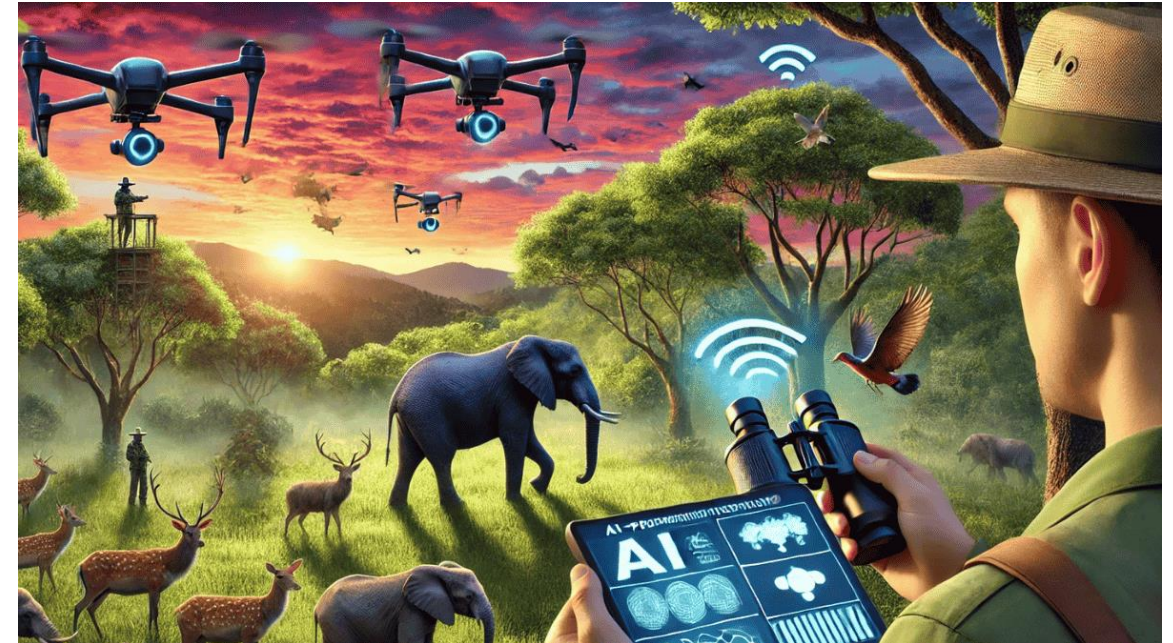

Solution Overview

Aquaforge Robotics proposes an autonomous AI-powered drone surveillance system to enable real-time monitoring of large forest areas for anti-poaching and wildlife protection. The system integrates intelligent drones, multi-sensor payloads, and AI-based analytics to detect illegal activities and generate instant alerts. This solution enhances coverage, reduces human risk, and provides actionable intelligence for forest authorities.

Unlike conventional surveillance drones, Aquaforge drones combine LiDAR-assisted under-canopy navigation, multi-sensor AI fusion, edge intelligence, and predictive analytics to deliver real-time, actionable wildlife protection in dense forest environments.

The Solution- Product / Service

Revenue Model

Sale or leasing of AI-enabled surveillance drones

Selling the drones to forest departments and conservation agencies in all over the world.

1

Surveillance-as-a-Service (SaaS)

contracts that include drone operations, real-time monitoring, and analytics.

2

Research and Development

After installation get annual maintenance and software subscription fees and do various research activities.

3

Subscription Services

Data-driven insights, predictive reports, and customization services are offered as premium add-ons. Training, capacity building, and long-term support agreements ensure **recurring and sustainable revenue**.

4

Competition

Rehabilitation and Mobility Device Companies

an end-to-end AI-powered wildlife surveillance product line that integrates indigenous drones, multi-sensor fusion (LiDAR, thermal, acoustic, multispectral), edge intelligence, and predictive analytics

1

Comprehensive Product Line

Existing products are **fragmented** and **not designed as a unified wildlife protection system**

2

Global Players in India

Existing products are **fragmented** and **not designed as a unified wildlife protection system**

3

Market Gaps

Wildlife protection remains **reactive, slow, and manpower-heavy..**

4

Aquaforge Robotics – Unique Advantage & Advancement

Aquaforge Robotics bridges the critical gap between conventional drones and defense-grade systems by delivering affordable, intelligent, and forest-optimized wildlife protection solutions..

5

Market Opportunity

Government Wildlife & Forest Departments

Increasing investments in AI and drone technologies to monitor protected forests, reserves, and national parks for real-time anti-poaching enforcement.

Eco-Tourism & Protected Reserve Operators

Private reserves and eco-parks require continuous, non-intrusive aerial monitoring to ensure animal safety and tourist security.

International Conservation NGOs & Agencies

Global wildlife protection organizations seek scalable, tech-driven surveillance solutions to reduce poaching and monitor endangered species habitats.

Border & Coastal Wildlife Protection Zones

High-risk regions near borders and coastlines demand autonomous drone patrolling to prevent illegal hunting, smuggling, and habitat intrusion.

Traction

- **Startup Status:** Established in 2024 with a vision to innovate.
- **Early Projects:** Training to the students about robotics and share the innovative ideas to ignite them. Completed more number of Drone survey project works.
- **Growth Potential:** Strong interest from industry stakeholders.

Go to Market Strategy (GTM)

- Institutional & Government-Led Market Entry:
 - Partner with Forest Departments, Wildlife Boards, and Defense agencies through pilot deployments in high-risk reserves.
 - Leverage government tenders, StartupTN, CSR, and international conservation funding programs.
 - Demonstrate impact via reduced poaching incidents, faster response times, and data-driven reports.
- Scalable Partnerships & Solution Commercialization
 - Collaborate with conservation NGOs, eco-tourism operators, and technology integrators for wider adoption.
 - Offer subscription-based SaaS + Drone-as-a-Service (DaaS) models including AI analytics, training, and maintenance.

Financials

Revenue: ₹2.5 crores

Year 1

- Pilot projects with government forest departments, NGO contracts, and initial Drone-as-a-Service deployments in select wildlife reserves.

₹6.5 crores

Year 2

- Expansion to multiple states, repeat government orders, subscription revenue from AI analytics platform, and fleet scaling across protected zones.

₹12 crores

Year 3

- Large-scale institutional adoption, long-term AMC & SaaS contracts, multi-reserve deployments, and international conservation partnerships.

Our Team

Founder & CEO

Dr. Rajendra Thilakar C

Expert in Robotics engineering and innovation.

Co-Founder

Manikanda Bharath K

CTO

Dr. A Kannan

Innovator in drone technology and AI systems, leading the development of cutting-edge solutions.

Head of R&D

Miss. Zuvairiya S

Specialist in sensor integration, driving the development.

Marketing Head

Mrs. Vijayalakshmi. R

Proven track record of global market penetration, leading Aqua Aerospace's strategic marketing efforts.

Expert in Robotics and 3D Printing, driving and innovation.

Project Manager

Er. Rajasekar V

Thank you
